

FactoryTalk ME

If **Property Panel** and **Connections** tabs are selected, the Tag assignment is shown for the selected object.

When a different Object is selected on HMI screen its Connection is shown.

This is a quick way of checking for the assigned Tag without having to keep opening and closing each HMI Object's Properties Dialog.

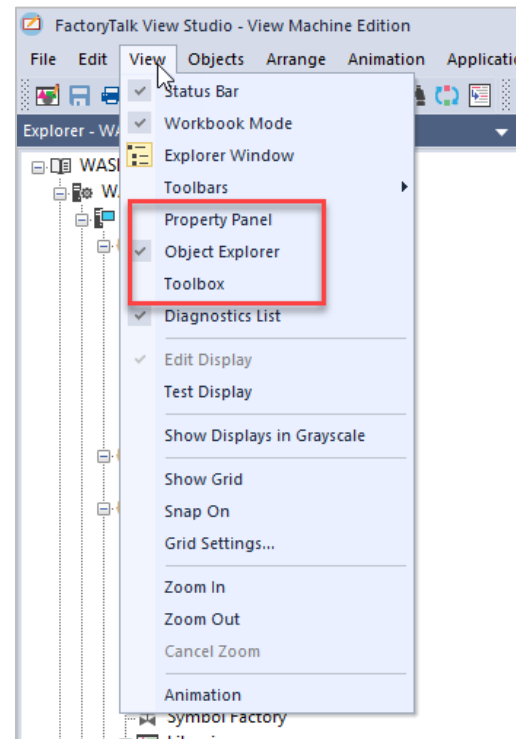

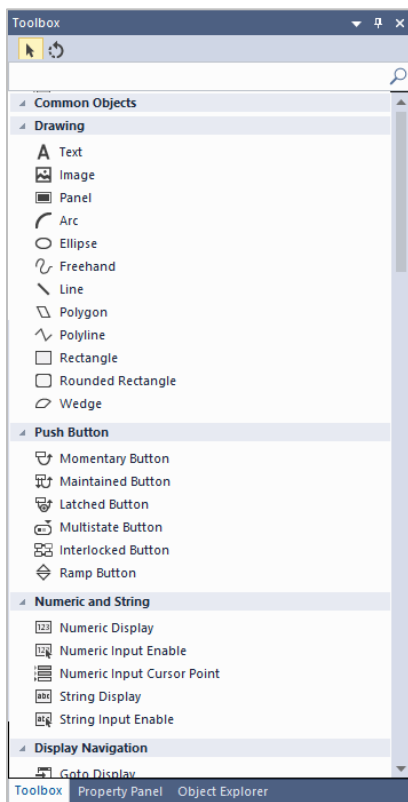

A Tag can be changed in the **Property Panel's Connections** tag field. Press either the **Tag** or **Exprn** button to open the corresponding dialog to edit the tag.

On return to this screen the change to the Tag is accepted. *You must still Save the display before closing.*

If the Property Panel or other tabs are not shown, use **Menu - View** to select the dialog.

NOTE if the Object **ToolBox** is not shown it was...

- Closed, use **Menu - View** to select and open.
- Unpinned, look for Tab on side, select, then Pin.

UNPINNED

Select the **Toolbox** tab on the side, then select the **pin** to disable Auto Hide.
